## Retractable Screen Surface Mount

### Measuring Daylight Opening (DLO) Height:

1. To measure the height of the opening, take one measurement from the base of the opening to the ceiling on the left side and another measurement from the base of the opening to the ceiling on the right side.
2. Use the measurement with the greater number for your height.

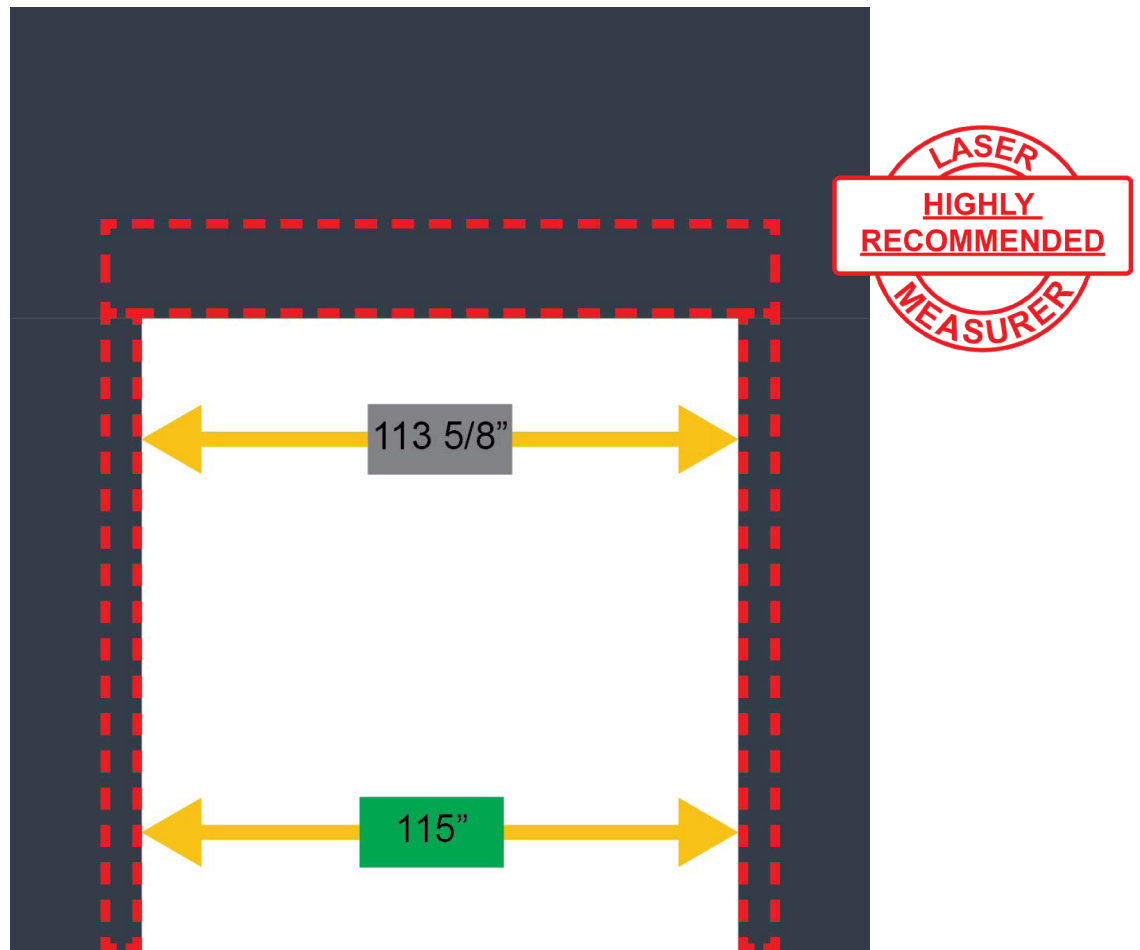

Example: If you measure an opening on the left side at 91" and measure on the right side at 90", your Daylight Opening (DLO) will be 91".

- 2a. **(Optional): Add 1 inch to your height measurement and cut the material on site. Cutting the tracks on site ensures a perfect fit for specific openings. For example, instead of using 91" as your Daylight Opening (DLO), input 92" and cut accordingly when the system arrives.**
- 2b. **(Optional): Add 4 inches to your Daylight Opening (DLO) to prevent the system's bottom bar from obstructing the opening.**

**Use Daylight Opening (DLO) for Surface Mount ONLY**  
*(TOM automatically calculates Finished Measurements).*

### Measuring Daylight Opening (DLO) Width:

1. Start by measuring the width of the opening. Take one measurement from the bottom of the opening and one measurement from the top of the opening.
2. Use the measurement with the greater number for your width.

Example: If you measure an opening at the bottom and get 115" as your measurement, then measure the top and get a measurement of 113 5/8", you will use 115" as your measurement for width.

**Use Daylight Opening (DLO) for Surface Mount ONLY**  
*(TOM automatically calculates Finished Measurements).*
